Stephens L.R.,
Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: 3-PHOSPHORYLATES THE CELLULAR PHOSPHOINOSITIDE
-!- PUDINS-4,5-BIPHOSPHATE (PTDINS (4,5)P2).
-!- CATALYTIC ACTIVITY: ATP + 1-phosphatidy1-1D-myo-inositol 4,5bisphosphate = ADP + 1-phosphatidy1-1D-myo-inositol 3,4,5-

trisphosphate.
-!- ENZYME REGULATION: WHEN BOUND TO P101 THE PI3K ACTIVITY OF P120 COULD BE ACTIVATED GREATER THAN 100-FOLD BY THE BETA-GAMMA G PROTEINS.

-!- PATHWAY: SIGNALING PATHWAYS REGULATING CELL GROWTH. -!- SUBUNIT: HETERODIMER OF A 101 KDa SUBUNIT AND A 120 KDa CATALYTIC

-!- SIMILARITY: BELONGS TO THE PI3/PI4-KINASES FAMILY.

This SWISS-PROT entry is copyright. Submitted (AUG-1996) to the EMBL/GenBank/DDBU databases.
-!- PUNCTION: 3-PHOSPHOPYLATES THE CELLULAR PHOSPHOINOSITIDE
-!- PUNCTION: 3-PHOSPHATE (PYDINS(4,5)P2).
-!- CATALYTIC ACTIVITY: ATP + 1-phosphatidyl-1D-myo-inositol 4,5-
bisphosphate = ADP + 1-phosphatidyl-1D-myo-inositol 3,4,5-
trisphosphate - ADP + 1-ylosphatidyl-1D-myo-inositol 3,4,5-
-!- ENZYME REGULATION: ACTIVATED BY BOTH THE ALPHA AND THE BETA-GAMMA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               G PROTEINS.
-!- PATHWAY: SIGNALING PATHWAYS REGULATING CELL GROWTH.
-!- SUBUNIT: HETERODIMER OF A 101 KDA SUBUNIT AND A 120 KDA CATALYTIC SUBUNIT (BY SIMILARITY).
-!- TISSUE SPECIFICITY: PANCREAS, SKELETAL MUSCLE, LIVER, AND HEART.
-!- SIMILARITY: BELONGS TO THE PI3/P14-KINASES FAMILY.

LISPINOSPIACE.

EXTERNATE SECULATION: ACTIVATED BY BOTH THE ALPHA AND THE BETA-GAMMA GRATHWAY: SIGNIATITY). WORTWANNIN SENSITIVE IN WR RANGE.
PATHWAY: SIGNIANING PATHWAYS REGULATING CELL GROWTH.
SUBUNIT: HETEROPHER OF A 101 kDa SUBUNIT AND A 120 kDa CATALYTIC SUBUNIT (BY SIMILARITY).
SIMILARITY: BELONGS TO THE PI3/P14-KINASES PAMILY.

Mus. TaxID=10090; "Murine PI3Kgamma: cDNA cloning and gene structure description."; Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases. 4,5-SECUENCE FROM N.A.

Wymann M.P., Hirsch B.;

Wymann M.P., Hirsch B.;

Wharine G protein-coupled phosphoinositide 3-kinase gamma cDNA
genomic organisation.";

Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: 3-PHOSPHORYLAYES THE CELLULAR PHOSPHOINOSITIDE
PTDINS-4,5-BIPHOSPHATE (PTDINS(4,5)P2) (BY SIMILARITY).

-!-CATALYTIC ACTILYTY: ATP + 1-Phosphatidy1-11D-myo-inositol 3,4,5-bisphosphate = ADP + 1-phosphatidy1-1D-myo-inositol 3,4,5-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                              This is the deduced amino acid sequence of the p120 catalytic subunit of pig deprotein regulated phosphatidylinositol-3' kinase (P13K), a heterodimeric enzyme which produces the intracallular messenger phosphatidylinositol (3,4,5)-triphosphate in response to activation of trimeric g protein-linked receptors. This novel protein, which also contains a regulatory subunit, p101 (see AMX3946), is found in cells of haematopoietic origin and is involved in immune system responses which cause inflammation. p101 cDnA (see AMX04644) was obtained from a neutrophil cDnA library. The invention encompasses pig and human p101 and p120 nucleotides (see AAV43346-49), host cell expression systems, p101 and p120 proteins (see AAV43346-49), host cell expression systems, p101 and p120 proteins (see AAV43346-49), host cell expression systems, p101 and p120 proteins see AAV43346-49), chost cell expression systems, p101 and p120 proteins (see AAV43346-49), chost cell expression and peptides, antibodies to these useful for treating inflammatory response disorders can be cultured host cell that expresses the p101 gene. Antagonists of dottein stimulated P13K (acting through the p101 subunit, can be used to treat arthritis, septic shock, adult respiratory distress syndrome (ABDS), pneumonia, asthma, allergies, reperfusion injury, atherosolerosis, cancer and Alzheimer's disease. The nucleic acids and their products can also be used for diagnosis, drug sergenting and clinical trial monitoring of inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a novel catalytic subunit, p120, from porcine phosphoinositide 3-hydroxykinase (PI3K) which is regulated by beta-gamma subunite of trimmeric G-protein. Nucleic acid coding for p101 or p120, or their fragments, are used as probes and primers for identifying p101 or p120 gene mutations, allelic variations or regulatory defects. Particularly for the diagnosis of activation disorders (or susceptibility) in cells of the hematopoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or sorreen for potential agents for treating immune disorders, particularly inflammation, e.g. arthritis, septic shock, adult respiratory distress syndrome, pneumonia, asthma, allergies, reperfusion injury, atherosclerosis, Alzheimer's disease and cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the pig pl20 regulatory protein.

The invention relates to the human pl01 regulatory protein.

Which is a subunit of the trimeric G-protein regulated phosphoinositide state of the trimeric G-protein can be used in screening assays to detect compounds which can be used to treat inflammatory response disorders. The compounds identified may be antagonists or agonists of G protein-regulated Pl3K gene expression and/or pl01 or pl20 gene product activity. These compounds may then be used to control immune system disorders, in particular arthritis, septic shock, adult respiratory distress, asthma, allergies, reperfusion injury, atherosclerosis, Alzheimer's disease and cancer. pl01 proteins and peptides can be used in the detection of mutant or inappropriately expressed pl01 regulatory subunits for the diagnosis of immune disorders and haematopoietic lineage cell activation disorders which will also a selst in devising a proper treatment or therapeutic regime. Using genetically engineered host cells to screen for compounds also allows compounds which affect the signal transduced by the activated pl01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a novel catalytic subunit, pl20, from human phosphoinoistide 3-hydroxykinase (Pl3K) which is regulated by beta-gamma subunits of trimeric G-protein. Nucleic acid coding for pl01 or pl20, or their fragments, are used as probes and primers for identifying pl01 or pl20 gene mutations, allelic variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the haematopoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The pl01 and pl20 proteins, peptides or fusion proteins are used to treat or screen for potential agents for treating immune disorders, particularly syndrome, pneumonia, asthma, allergies, reperfusion injury, distress atherosclerosis, Alzheimer's disease and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

                                                                                                                                                                                                   This sequence represents the human pl20 regulatory protein.

The invention relates to the human pl01 regulatory protein.

The invention relates to the human pl01 regulatory protein.

The blow of the trimeric G-protein regulated phosphoinositide soft-kinase (PISK). The pl01 regulatory protein can be used in screening assays to detect compounds which can be used to treat inflammatory response disorders. The compounds identified may be antagonists or agonists of G protein-regulated PISK gene expression and/or pl01 or pl20 gene product activity. These compounds may then be used to control immune respiratory distress, asthma, allergies, reperfusion injury, atherosclerosis, Alzheimer's disease and cancer. Pl01 proteins and peptides can be used in the detection of mutant or inappropriately expressed pl01 regulatory subunits for the diagnosis of immune disorders and haematopoietic lineage cell activation disorders which will also assist in devising a proper treatment or therapeutic regime. Using compounds which affect the signal transduced by the activated pl01 regulatory subunit to screen for compounds also allows compounds which affect the signal transduced by the activated pl01 regulatory subunit to be identified.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                  The present invention relates to identifying a modulator of the phosphatidylinositol 3-kinase (PI3K; pllodelta) enzyme that binds to the catalytic subunit via a SH3 domain-containing polypeptide such as inASP-1. Also described are methods of assaying the specific binding affinity of the PI3-kinase binding partner. Such modulators are useful for the treatment of diseases characterised by the undestrable or excessive activity of PI3Kdelta. For example the modulators can be used for inhibiting the growth or proliferation of cancer cells (e.g. malignant neoplasms of lymphoid and reticulendothelial tissues, Hodgkin's lymphoma, leukaemias), inflammatory diseases (e.g. rheumatoid arthritis), ophthalmic disorders (e.g. allergic conjunctivitis), arthritis), cophthalmic disorders (e.g. allergic conjunctivitis), bowel diseases (e.g. chronic inflammatory bowel diseases (e.g. chronic inflammatory bowel disease), inflammatory dermatoses (e.g. chronic dermatitis; central or peripheral nervous system inflammatory diseases (e.g. meningitis), bacterial pneumonia, and Type I diabetes mellitus. The present sequence represents human

This is the deduced amino acid sequence of the p120 catalytic subunit of human G-protein regulated phosphatidylinositol-3' kinase (P13K), a heterodimeric enzyme which produces the intracellular messenger phosphatidylinositol (3,4,5)-triphosphate in response to activation of trimeric G protein-linked receptors. This novel protein, which also contains a regulatory subunit, p101 (see AAW33949), is found in cells of hermatopoietic origin and is involved in immune system responses which cause inflammation. Human p120 c DNA was obtained from a leukocyte CNA library. The invention encompasses pig and human p101 and p120 mucleotides (see AAW33946-49), for the cell expression systems, p101 and p120 proteins (see AAW33946-49), fusion proteins, polypeptides and peptides, antibodies to these proteins, and transgenic and knockout animals. Compounds which are leastful for treating inflammatory response disorders can be identified by screening assays using a G protein activated P13K (acting through the p101 subunit, especially by distrupting the interaction between the p101 and p120 subunits) can be used to treat atthirties, septic shock, adult especially by distrupting the interaction between the p101 and p120 c subunits) can be used to treat atthirties, septic shock, adult especially distrupting the interaction between the p101 and p120 c respiratory distress syndrome (ARDS), pneumonia, ashbma, allergies, reperfusion injury, atherosclerosis, cancer and Alzheimer's disease. The nucleic acids and their products can also be used for diagnosis, dispasses
                                                                                                                                                                                   DNA encoding G-beta-gamma regulated phosphatidyl-inositol-3' kinase, p101 and p120 subunits - useful for diagnosis, drug screening, clinical trial monitoring and treatment of inflammatory disorders
                                                                                                                                                                                                                                                                                          Claim 55; Fig 11; 151pp; English.

                                                                                                                                                                                                                                                                                                     library using PCR primers corresponding to amino acid sequences (NGDDLR and HIDFG. The amplified fragment was used to probe a human USI (NGDDLR and HIDFG. The amplified fragment was used to probe a human USI call cDNA library and several overlapping clones were isolated. The largest clone coded for a protein of 1049 residues. The protein is a novel phosphatidylinositol 3-kinase (PISK) that differs in its requilatory mechanism from the known PISK-alpha and -beta enzymes. The new enzyme has been designated PISK-alpha and -beta enzymes. The new enzyme has been designated PISK-gamma. Another clone, coding for a PISK-gamma having the present sequence of 1050 residues, was then isolated. The enzyme can be used as an immunogen. The enzyme, antibodies against it or nucleic acid encoding it can be used for modulating cell proliferation, receptor-mediated signal glucose transport and anti-lipolytic activity or for treating Alzheimer's disease.

N.B. Although the claimed sequences are referred to by SEQ.ID.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Southern blot analysis was performed using a bovine cDNA probe contg.

a fragment of a PI3-kinase-encoding sequence and human cDNA isolated
from a cronal library constructed from manch isolated from the human
cell line Kdla. Positive clones were sequenced to give a human
cell line Kdla. Positive clones were sequenced to give a human
cell line Kdla. Positive clones were sequenced to give a human
homology with the bovine sequence. The domain encoding residues 19-
100 of human plio is sufficient to encode the kinase which will
a secoiate with the p65 kinase subunit. The gene may be used to
provide a protein with P13 kinase activity, and is useful for
creening for (ant) agonists of P13 kinase activity which could be
useful for stimulation or inhibition of cell proliferation and hence
prophylaxis or therapy. Platelet or neutrophil activity or blood
glucose levels can be controlled using the kinase.
Chydated on 93-MAR-2003 to add missing OS field.)
